

Auto Dimming Now Available on the Defender® and RX 2700CC™ Lightbars

**Photo Cell for Auto Dimming
with Protective Shielding**

Code 3 now offers Auto Dimming as an upgrade on the Defender and RX 2700CC lightbars providing maximum flexibility of light output based on ambient light level. Manual dimming is still available as a standard feature. Auto Dimming allows cruise lights to operate when the lightbar is set to DIM (it does not change the brightness of the cruise lights).

Auto Dimming is also available as an upgrade on Defender and RX 2700CC lightbars already in the field. The latest version of the CC software is required—(Series 600 Version 6.0 or Series 800 Version 2.0).

The Auto Dimming feature was engineered in direct response to customer needs. Code 3 continuously strives to meet the needs of the public safety community. Contact Code 3 for more information on this new feature.

Established in 1974, Code 3 Inc. designs and manufactures a complete line of emergency lighting and warning products for police, fire, emergency response, utility and industrial applications. Code 3 Inc. is a Public Safety Equipment Company.
